Shared Hosting vs. VPS vs. Dedicated – Which One Do You Need?

Understanding the Three Main Hosting Types

Shared hosting is budget-friendly but resources are split among many sites. VPS gives you dedicated portions of a server. Dedicated means an entire physical server for you alone. For most startups and small business sites, shared or entry-level VPS is ideal. Hosting.com offers all three, so you can scale without migrating away.

When to Start With Shared Hosting

If you have a new blog, small business site, or portfolio, shared hosting keeps costs low while you validate your idea. The key is choosing a provider (like Hosting.com) that doesn't oversell server space. Get started here: Hosting.com – Exclusive Offer

Signs You Need to Upgrade to VPS or Dedicated

Consistent traffic growth, speed drops during peak hours, or needing custom software installations. Don't wait until your site crashes.
